CARBON CRUNCH

There is a mean budget of around 600 gigatonnes (Gt) of carbon dioxide left to emit before the planet warms dangerously, by more than 1.5–2°C. Stretching the budget to 800 Gt buys another 10 years, but at a greater risk of exceeding the temperature limit.

*Data from The Global Carbon Project.

CLIMATE SHORTFALL

Emissions trajectories for three advanced industrialized regions show that enacted and pledged policies will be unable to deliver the ambitious cuts to emissions agreed under the 2015 Paris framework.

- Historical emissions
- Business as usual*
- Enacted policies*
- Pledged policies (reported)
- Target emissions (nationally determined contributions)

*Estimated using the global-warming mitigation assessment model DNE21+ (Ref. 1).

The current actions are not enough!

Limiting warming to 1.5°C and 2°C involves rapid, deep and in most cases immediate greenhouse gas emission reductions

Net zero CO₂ and net zero GHG emissions can be achieved through strong reductions across all sectors

Source: IPCC AR6 Synthesis Report

8.6.2023

Simpson

Current actions are not enough!

"factor 10"

same production and welfare
by one tenth of current resources,
one tenth of current emissions

By 2050, human life, production and consumption must be within our planet's carrying capacity.

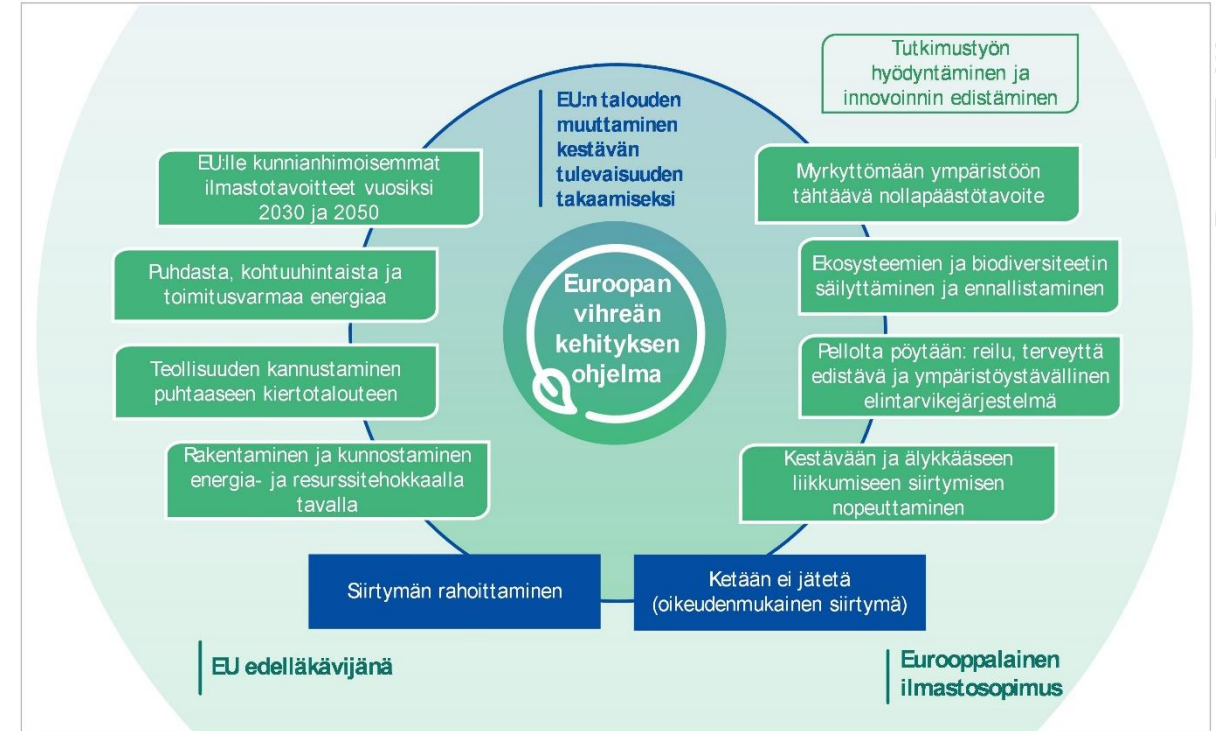

1. Circulation of completely non-renewable resources in closed systems
2. Sustainable use of renewable resources
3. Biodiversity will not be harmed, or if harm cannot be avoided, the damage should be compensated elsewhere
4. Operating without harmful emissions

Sinpea

European Green Deal

- ▶ Fit for 55 and RePower EU
- ▶ Just transition mechanism
- ▶ European Climate Law
- ▶ Circular Economy action plan
- ▶ EU Biodiversity Strategy for 2030
- ▶ Farm to Fork
- ▶ Renovation wave
- ▶ Chemicals strategy for sustainability
- ▶ European Bauhaus
- ▶ EU Industrial strategy for net-zero industry
- ▶ Strategy for sustainable and smart mobility
- ▶ EU Forest Strategy
- ▶ Zero pollution action plan for water, air and soil
- ▶ Sustainable finance strategy

The EU will:

Become climate-neutral by 2050

Protect human life, animals and plants, by cutting pollution

Help companies become world leaders in clean products and technologies

Help ensure a just and inclusive transition

Simpson

European Green Deal – What is needed?

- ▶ **Circular Economy**
 - ▶ Designing out waste
 - ▶ Ten-fold resource efficiency
 - ▶ Sustainable products
 - ▶ Product passports
- ▶ **Climate neutrality**
 - ▶ Climate law
 - ▶ LULUCF, RED...
 - ▶ Current actions not enough!! → Increasing the ambition and level of actions.
- ▶ **Biodiversity**
 - ▶ Biodiversity strategy → Nature restoration!!
 - ▶ Regenerative agriculture and forestry
 - ▶ Forest degradation law

Simpson

Circular Economy Action Plan

- ▶ Reducing household waste 50%
- ▶ Extension of Ecodesign directive
 - ▶ incl. potential digital product passports
- ▶ Strategy for sustainable built environment
- ▶ “right to repair” for electronics
- ▶ GPP
- ▶ Textile strategy & EPR
- ▶ + electronics, batteries, food, water, nutrients, ELV, microplastics, global actions

European Parliament position (February 2021):

- Science based binding targets within the planetary boundaries: **material and consumption footprints**
- Product policy
 - *designing out waste*
 - extension of the Ecodesign directive
 - early/planned obsolescence
- digitalisation: opportunities and challenges
 - product passports
 - service economy
- buildings, packaging, plastics, textiles, electronics, cars and batteries

A Green Deal Industrial Plan for the Net-Zero Age

- ▶ A Green Deal Industrial Plan for the Net-Zero Age
 - ▶ Competitiveness of the European carbon neutral industry and carbon neutral technology
 - ▶ Accelerating fast transition to climate neutrality
 - ▶ Product capacity
 - ▶ Circular Economy
 - ▶ Is not focused enough!!!
- ▶ Includes:
 - ▶ Net-Zero Industry Act
 - ▶ Critical Raw Materials Act
 - ▶ Electricity Market Design

Self-sufficiency

Strategic independence

Net-zero industry and technology

Ensuring critical raw materials needed for energy renovation and digitalization

Circular Economy Initiatives 2022-2023

Ecodesign Regulation	2022
EU Sustainable and Circular Textile Strategy	2022
Sustainable Built Environment Strategy	(late)
Construction Products Regulation	2022
Packaging and Packaging waste Regulation	2022
Policy Framework for biobased, biodegradable and compostable plastics	2022
Empowering Consumers for the Green Transition	2022
Green Claims Directive	2023
Microplastics Pollution – measures to reduce its impact on the environment	Upcoming Q2 2023
Critical Raw Materials Act	2023
Net-Zero Industry Act	2023
Circular Economy Monitoring Framework	2023
Common Rules Promoting the Repair of Goods	2023

Main Sectors Covered

- ▶ Textiles
- ▶ Electronics and information/communication technology
- ▶ Food products, water, fertilizers and nutrients
- ▶ Packaging
- ▶ Batteries and vehicles
- ▶ Construction and buildings
- ▶ Waste Management and Shipments

Sinpa

Citizen/consumer involvement and protection?

- ▶ Main proposals
 - ▶ Empowering consumers for the green transition
 - ▶ Green Claims
 - ▶ Common rules promoting the repair of goods
 - ▶ Corporate Sustainability Reporting
 - ▶ Corporate Sustainability Due Diligence
- ▶ Information availability and possibility to compare products and companies
 - ▶ Protection from false claims
- ▶ Citizen voluntary action, active engagement
- ▶ Demanding sustainable products and/or supporting new innovations
 - ▶ Products that last longer
 - ▶ Products that are sustainably and ethically produced
- ▶ Products as services
 - ▶ Renting, Sharing, Repairing, Upgrading, Re-selling...
- ▶ Right to repair
- ▶ Supporting circularity by recycling and supporting products as services thinking

Sinpa

Proposal for a Regulation on Ecodesign for Sustainable Products

Objective: **make sustainable products the norm** on the EU market and reduce their overall environmental and climate impacts

- ▶ 'Ecodesign approach'
 - ▶ product-specific legislation
 - ▶ durable, reliable, reusable, upgradable, repairable, easier to maintain and refurbish, and energy and resource efficient.
 - ▶ substances that inhibit circularity
 - ▶ amount of recycled content products contain
 - ▶ ways to make them easier to remanufacture and recycle.
 - ▶ information requirements and **digital product passport**
 - ▶ « classes of performance », labels etc. (see. EU Energy Label)
 - ▶ reparability score?
 - ▶ mandatory green public procurement criteria
 - ▶ measures to prevent the destruction of unsold consumer goods
 - ▶ far-reaching transparency requirements for those choosing to discard unsold goods,
 - ▶ possibility to ban their destruction for relevant product groups
- ▶ In the meanwhile: Ecodesign and Energy Labelling Working Plan 2022-2024

New opportunities

remanufacturing, recycling and repair

maintenance, reuse, recycling, refurbishment, repair and second-hand sales

Proposal for Empowering Consumers for the Green Transition

- ▶ Commission proposal out in March 2022, EP plenary in May 2023, Currently in Trilogues
- ▶ The directive would amend the **Unfair Commercial Practices Directive** (UCPD) and the Consumer Rights Directive (CRD). It would include the following elements:
 - ▶ **Consumers would have to be informed** which products are more **durable and repairable**. Environmental and social impact, durability and repairability would be added to the list of product characteristics about which traders are **forbidden to mislead consumers** (Article 6 UCPD);
 - ▶ Traders providing a service that compares sustainability of products would be required to **disclose information** on the method of comparison, the products that are being compared and suppliers of the products or risk being found to be **misleading consumers** by means of omission of material information (Article 7 UCPD);
 - ▶ Ten new commercial practices would be added to the list of commercial practices that banned in all circumstances (Annex I UCPD), including displaying a **sustainability label** that is not based on a **certification scheme** or not established by public authorities; making generic environmental claims; presenting requirements imposed by law on all products as a distinctive feature of a trader's offer; omitting to inform the consumer about a feature of a product that limits its durability; **false claims** about durability of a product; false claims about repairability of a product; **persuading the consumer** to replace a product earlier than necessary for technical reasons;
 - ▶ When buying products, consumers would have to **be informed** that the producer offers a commercial **guarantee** of durability longer than the current two-year legal guarantee, if that is the case. Consumers would also have to be provided with a repairability score, if a repairability score is already established for that product under EU law, or information about the availability of spare parts and user and repair manual, if the producer has made such information available (Articles 6 and 7 CRD).

Simpson

Proposal for a Directive on Green Claims

- ▶ Commission proposal out in March 2023
- ▶ New criteria to **stop companies from making misleading claims** about environmental merits of their products and services.
- ▶ Ensuring that environmental labels and claims are credible and trustworthy will allow consumers to make better informed purchasing decisions. It will also boost the competitiveness of businesses who are striving to increase the environmental sustainability of their products and activities.

Sinpa

Proposal on Common Rules Promoting the Right to Repair

- ▶ Commission proposal out in March 2023
- ▶ The proposal will make it easier and more cost-effective for consumers to repair as opposed to replace goods. Additionally, more demand will translate into a boost to the repair sector while incentivising producers and sellers to develop more sustainable business models.
- ▶ The proposal will ensure that more products are repaired within the legal guarantee, and that consumers have **easier and cheaper options to repair** products that are technically repairable (such as vacuum cleaners, or soon, tablets and smartphones) when the legal guarantee has expired or when the good is not functional anymore as a result of wear and tear.

Sinpon

Corporate Responsibility Initiatives

▶ Corporate Sustainability Reporting Directive

- ▶ Entered into force in January 2023
- ▶ The new rules will ensure that investors and other stakeholders have access to the information they need to assess investment risks arising from climate change and other sustainability issues. They will also create a culture of transparency about the impact of companies on people and the environment.

▶ Corporate Sustainability Due Diligence

- ▶ Parliament voted in June 2023 → trilogues.
- ▶ The proposal aims to foster sustainable and responsible corporate behaviour throughout global value chains. Corporations will be required to identify and, where necessary, prevent, end or mitigate adverse impacts of their activities on human rights, such as child labour and exploitation of workers, and on the environment, for example pollution and biodiversity loss.

▶ Reporting obligations for corporations

- ▶ → Increase the access for transparent information
- ▶ → Better consumer choices?
