# MUNICIPALITY OF KORDELIO - EVOSMOS

ΔΗΜΟΣ  
ΚΟΡΔΕΛΙΟΥ  
ΕΥΟΣΜΟΥ

19-20 April, 2017 | Kick off Meeting, Nicosia

# Municipality of Kordelio - Evosmos

**Located in the Region of Central Macedonia**

**2<sup>nd</sup> largest Municipality of Thessaloniki**

**Population: 100.000 citizens**

# Urban Mobility and Accessibility

- **Necessary repairs and maintenance works of road surfaces**
- **High residential development does not comply with existing road infrastructure**
- **Lack of parking**
- **Intense phenomenon of illegal parking**
- **Unsatisfactory quality of operation of the existing urban transport system**
- **Redesign of bus lines network because of metro operation**
- **Inadequate infrastructure for cycling**
- **Creation of Traffic Planning - Sustainable Urban Mobility office**
- **Preparation of Action Plan regarding Sustainable Urban Mobility**

# Operational Programme

**Regional Operational Programme:  
“INVESTMENT FOR GROWTH AND JOBS”**

**Priority Axis 4:**

**"Supporting the shift towards a low-carbon  
economy in all sectors“**

**Thematic Objective 4e1:**

**“Promoting Urban Mobility Plans to the Region  
of Central Macedonia”**

# Urban Mobility in Region of Central Macedonia

- The majority of the population of the RCM lives in urban areas. The quality of life in cities of the Region undergoes degradation, due to increased motor vehicle traffic.
- Beyond the impact on the urban environment, health and economy, the urban mobility and accessibility is facing serious problems due to traffic congestion, the lack of parking policy and the low level of service of public transport.
- Campaigns of introducing alternative modes of transport (bicycle, bus, transit modes) should be implemented
- SUMP should be the first priority of each city and ROP can finance the implementation of such a Plan, in order all the major investments of urban public transport to be included in an integrated and clear vision.

# Expected results

- 1. Reduction of urban pollution in big cities**
- 2. Improvement of urban mobility system**
- 3. Reduction of time and movement costs**
- 4. Upgrade of urban environment, health and quality of life**
- 5. Improvement of city' s image**

# Indicative actions

- **Traffic management using smart mobility systems**
- **Use of gas in more buses**
- **Use of technologies for emission reduction in fuels**
- **Capacity building for the development and expansion of urban maritime transport in Thermaikos Gulf**
- **Creation of cycle paths, footpaths and low traffic streets**
- **Actions of information and awareness raising of urban center residents about multimodal urban mobility**

# Improvement of Policy Instrument

**Through “InnovaSUMP” project, good practices will be transferred to Managing Authority (MA)**

**MA's calls for SUMP projects or for projects which have SUMP as a prerequisite will incorporate the innovations proposed by the InnovaSUMP**

**The improvement of the ROP can be achieved through the introduction of a new criterion for the selection of a final beneficiary to get financial support for the implementation of a public transport investment. This criterion has to do with the existence or not of an Integrated SUMP**
