

Region of Crete | The energy upgrading strategy under the REBUS program

The strategy of the Crete Region for the energy upgrade of its buildings was presented at the 3rd meeting of the European project REBUS in Malmö, Sweden. The REBUS project, implemented by the Region of Crete, aims to identify directions for efficient energy upgrading of public buildings and constitutes for the Region of Crete a "tool" for the realization of its goals for saving energy and resources. Concluding the first year of successful implementation of the European REBUS, the project partners had the opportunity to assess their progress so far and set new ambitious targets.
