

Stakeholders Group Meeting N° 1

Date	16/02/2017
Meeting place	Cordoba
Aim of this meeting	<i>Second meeting of the different representatives of the different stakeholders in Cordoba for the INTHERWASTE project. The different existing solutions in the city have been reviewed again, as well as other good practices that are being implemented in other European cities.</i>

**Minutes from the meeting:
Topics explored - Decisions taken**

On 19/09/16 different stakeholder group representatives met in the INTHERWASTE group in Cordoba

After the presentation and members of the different groups were informed, the following matters have been explored during the meeting:

- Dissemination of the European project, partners, duration and aims
- Reminder about the new Public Hygiene decree regarding waste collection for producers of large quantities of waste.
- Information about waste storage facilities regulations and the technical construction code.
- A brief outline of the different solutions for waste collection in the city.
- Commitment to attend the different meetings and assemblies where members presence is requested.

A general view has been drawn up regarding solutions implemented in other Spanish and European cities for waste management in historical areas.

Regarding the solutions we can highlight:

- A favourable reception of new technologies for waste collection with the return or refund system, either by payment in cash or gifts (tickets, coupons, discounts, etc.)
- Problems regarding door to door collection, due to waste being in the street with no container and the existence of accumulations and excessive time outside.
- Need for large producers to set up waste storage chambers and collection from them, with either exclusive or shared use.
- Impetus for the creation of more ecopoints in the historical area.
- Use of parking areas in buildings to create community waste deposit chambers or ecopoints.
- More control to ensure compliance with the timetable and separation.
- Information campaigns about separation at source.
- Planning by the town council/Town planning so that areas are destined to ecopoints within town planning activities in historical areas.

We finished the meeting with the attendees feeling highly satisfied and willing to have a meeting with us in a few months and carry on making progress in the discussion and view of ideas by all represented parties.
