### *Curriculum vitae*

Ferran Sanchis Hernández graduated in Environmental Sciences from the University of Girona in 2004. Later he obtained the Master in Integrated Water Management at the Polytechnic University of Catalonia. In 2011 he took a course on Environmental Assessment of Urban Planning through the professional association.

He entered to work in the Urban Ecology Agency of Barcelona in 2005, where he has since performed tasks of superior technician in the environment. Specifically, he participates in the design and calculation of indicators of urban sustainability, especially those related to mobility and water management. He is also responsible for developing diagnostics and proposals for the improvement of urban car parks, as well as logistics in cities, analyzing loading and unloading operations and designing alternative proposals. He has experience in the planning and execution of field work for the collection of data, and in their treatment. He is also responsible for the analysis of the hydrological cycle in the cities, and studies the possibility of taking advantage of alternatives to conventional drinking water.
