Summary of the Report on COP Meeting – Semester 2

PP5 Municipality of Middelburg

At the second Community of Practice (CoP) meeting, held by the Municipality of Middelburg the results of the earlier done SWAT analysis were discussed. The focus was set on the questions;

- How to reach, engage and win historic building owners to increase the energy efficiency of their building?

Ideas were collected whereby the importance of transporting information concerning energy efficiency to the owners was derived from the fact that it is yet too difficult for them to take necessary measures.

Following up training events for historical building owners will be organised. Additionally, a free infra-red scan of the buildings is offered to known historic building owners in the region of Middelburg.

Finally, the implementation of solar panels onto historic buildings was revised and judged as an early stage success, that shows the potential of historic buildings as well as the high interest in their energy efficiency by the building owners.
