

Partner experience and practice (please detail: service name, short description and location)	How this PEP has contributed to the services developed in <u>yourAction</u> Plan (detail any transfers, full or partial of good practice)
<p>Maker Lab Slovenia – an experimental/research fabrication laboratory based at the University of Ljubljana</p>	<p>The partnership projects that have been developed through the Maker Lab, connecting rural business and stakeholders with masters , doctoral and <u>post-doc</u> students are an inspiring model of collaboration and good governance in an innovation systems, sharing and enabling access to both human and technical resources. This approach has been influential in our future service development where e-governance, will be at the forefront</p>
<p>Lab <u>Altobello</u></p>	<p>Lab <u>Altobello</u> with its multiple 'family friendly' services, (linking social innovation with digital innovation) co-developed with users (co-working space, with linked <u>crèche</u> for example) again is a governance model which serves for our future service development. The continuous or permanent innovation process was particularly noted where management and users jointly evolve services to meet user and community needs. Our e-governance plans for current and future service development again will incorporate lessons learnt from Lab <u>Altobello</u></p>
<p>Nerve Centre and Eighty One and Co-Lab, Derry and Donegal</p>	<p>The collective evolution of the culture, co-working and digital start up hubs visited in Ireland through multi-stakeholder governance of the hubs, the focused development of 'cooperation <u>environments</u> has contributed and will contribute to our e-governance models for future service development in our region</p>
<p><u>Lormes</u> Digital Hub</p>	<p>The multi-functional hub visited in <u>Lormes</u>, in a remote rural upland areas, where public, community and business services are found in the same location and where staff serve different functions for all three 'user' groups again is an 'e-governance' model both for multi-service delivery in a local hub or service <u>eco-system</u>, where the lines between public, private and community goods or actors need to be more porous.</p>
