# Preface

## Gernot Blümel

Federal Minister for the EU, Arts, Culture and Media of the Republic of Austria

About ten years after the successful first edition of the European Design Report it is a great pleasure that during Austria's Presidency of the Council of the European Union in the second half of 2018, a new edition of the report is being launched.

As Federal Minister for the EU, Arts, Culture and Media I appreciate this initiative and would like to thank the Bureau of European Design Associations (BEDA) and designaustria as member and professional representative of Austrian designers in Brussels since Austria became part of the European Union, for the compilation and edition of the second European Design Report.

Not only is Austria well known for its arts and culture in the past but also for its contemporary artistic and creative activities and achievements. A wide variety of innovative, young designers experiment with new approaches and create our present and our future, designing and working on a high international level.

Design as creative industry is not only an important part of the economy and a major force to develop and realize ideas, but also plays an essential role in arts and culture. Within these measures the European Design Report provides a great overview of the design industry in facts and figures on the European level.

A handwritten signature in blue ink, consisting of stylized, overlapping loops and lines, positioned above the printed name.

**Gernot Blümel**

Federal Minister for the EU, Arts, Culture and Media

 Federal Chancellery

# Preface

## Margarete Schramböck

Federal Minister for Digital and Economic Affairs of the Republic of Austria

Non-technological innovation, including design, as well as culture-based creativity, are important tools to boost the economy's competitiveness and growth and thus improving the quality of life for the citizens of Europe.

Design as part of the creative industries plays a crucial role when it comes to the development, dissemination and marketing of products, processes, services and business models due to radical changes in society and the economy. The rapid development of digital networks and communication technologies have severe impacts on design: it changes the value-chain from producer to consumer and the work-processes resulting from the use of new tools.

As a consequence, the conventional borders between product design, production and the user are beginning to merge. Design as a driver of user-centered innovation contributes substantially to getting good ideas onto the market. It enhances agile and focused product and service development and facilitates the development of better, transparent and more effective public services.

I welcome the initiative and the commitment of the Bureau of European Design Associations for a second edition of the European Design Report and would like to thank its Austrian member association Design Austria to compile and present the report during Austria's Presidency of the Council of the European Union.

A handwritten signature in black ink, appearing to read 'M. Schramböck', written in a cursive style.

Economic Affairs

# Prologue

In this edition of the »European Design Report 2.0«, published more than 10 years after a first attempt that sought to map the European design industry, one can see that many achievements have been brought about; in many countries, new and improved data have been made available, and new countries appear on the map.

More or less all of the European Member States and acceding countries, as well as EEA countries and Turkey, are included in this edition – all in all 37 nations (compared to 2006, there were 27) and except Montenegro and the European microstates (Andorra, Liechtenstein, Monaco, San Marino, and Vatican with less than 0.1m inhabitants) all European countries are included.

To give a first survey in terms of size and economic performance, all countries are introduced with their number of inhabitants and their GDP (gross domestic product) per capita expressed in PPS (purchasing power standards). These data and figures were taken from Eurostat [ec.europa.eu/eurostat](http://ec.europa.eu/eurostat).

On the following pages either received information/(last available) data and answers to a questionnaire or results of done research on available studies, surveys and polls conducted by official institutions and private interest organisations have been compiled and reproduced; no additional specific research on the individual countries was conducted on the editor's side.

On the bottom of each page/country, the answers received on NACE code, design policy, innovation and/or creative industries strategy and design awards is documented; the specific answers »yes« or »no« are given in colour and bold (if something is neither highlighted nor bold, no answer has been received).

Still, measuring design as an industry and identifying design in official statistics is problematic. Design is no/not one sector, but has to be seen as transversal/transsectoral activity.

Although a lot has been achieved in the last 10 years (when the first European Design Report had been published), still, a lot has to be done in order to get reliable and comparable data. A first step and, as it seems, an easy exercise could be an aligned terminology and usage of NACE Code 74.10 in all European countries with the introduction of the same named subcategories for the different disciplines.

Thus, we would welcome NACE Code 74.10 »Specialised Design Activities« with (aligned) subcategories – up to now only in use in 17 (out of 37) countries – which allow more accurate measures, comparisons and benchmarking. And: Congratulations to 11 European countries which have a national design policy/strategy in place/use!

# Editorial

## Bart Ahsmann

President, Bureau of European Design Associations

With great pleasure we present you the second European Design Report of national facts and figures from 37 European countries. These facts show again that design is an economic sector of importance in Europe.

These are exciting times for design. Leading global companies have a new appetite for design, while governments are coming to see that design can play a major role in solving the toughest social and environmental problems. More and more over the last fifteen to twenty years, design has been applied in a wider range of contexts, from services to understanding user and citizen needs to defining strategy and policy at the highest levels in both business and government. At the same time, in more established areas such as product and graphic design, design continues to be a vital differentiator and generator of value.

At a time of daunting challenges for Europe, there is, therefore, enormous potential for design to play a fundamental role in delivering solutions. Given the right conditions, it could help to grow Europe's global competitiveness and make the connections between citizen and environmental needs and social responsibility.

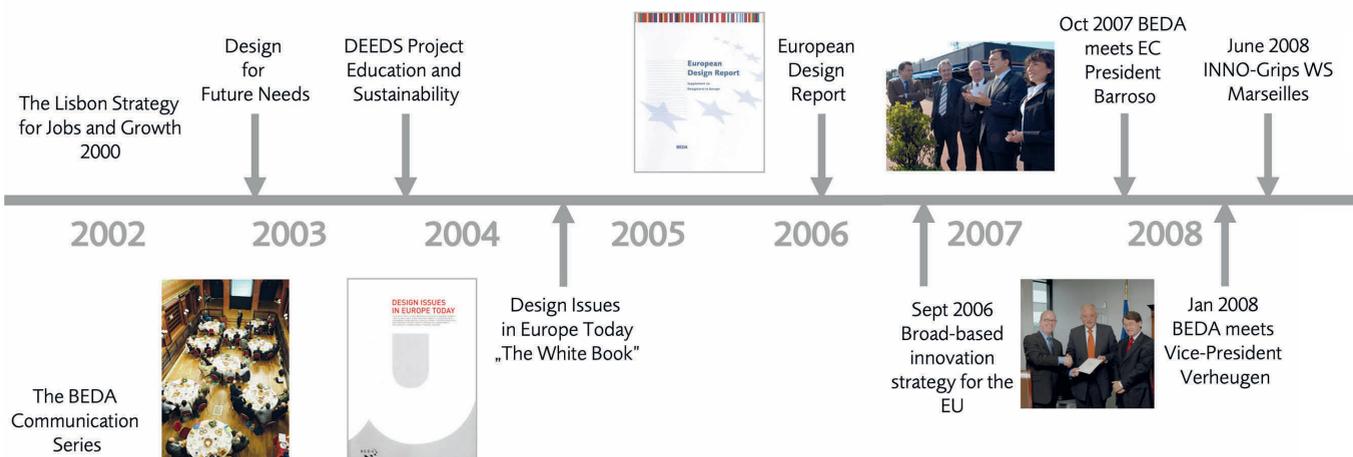

BEDA is the only pan-European multi-disciplinary design association. We see design as a creative approach to problem-solving that can be applied across the private and public sectors to drive innovation in products, services, society and even policy-making. Our vision is for design to be embraced in Europe as a driver for growth and prosperity. The facts represented in this publication help us in proving that value.

A handwritten signature in blue ink, consisting of stylized, overlapping loops and a long horizontal stroke extending to the right.

**Bart Ahsmann**

President, Bureau of European Design Associations

## BEDA and EU Design Policy

# Introduction

## Michael Thomson

Founder and Director, Design Connect

Since the publication of BEDA's first EU Design Report in 2006 and its 2007 supplement, the landscape for design and design policy at the European level has changed dramatically.

BEDA's lobbying of the EU, including its seminal meeting at the end of 2007 with the then EU Commission President, José Manuel Barroso and Commission Vice President Gunter Verheugen in early 2008, led in 2010 to the inclusion of design as a component of the European Commission's, »Innovation Union«, a flagship initiative of the Europe 2020 strategy. For the first time, design – with a key role as a user-centred driver of innovation in bringing ideas to the market – was recognised at the European level as a strategic contributor to Europe's innovation agenda.

### Inputs

As a consequence, the European Design Innovation Initiative was launched in 2011 to exploit the full potential of design-driven innovation and to reinforce the links between design, innovation and competitiveness. The European Commission acted further in establishing the European Design Leadership Board which published its Report 2.0 »Design for Growth and Prosperity« in 2012.

In 2013 the Commission published its European Design Action Plan to promote the understanding of design's impact on innovation; its role in industry to strengthen European competitiveness, and its potential to drive renewal in the public sector.

Under the plan, six EU projects, co-financed through the Competitiveness and Innovation Programme, were delivered by a total of 46 organisations from 19 Member States. In addition to these, a larger co-financed project, 'Design for Europe' created a web-based platform supporting peer-learning, networking and partnerships and ran a significant programme of events promoting design-led innovation across Europe.

In 2016, the Commission launched the »Design for Enterprises« programme to deliver training sessions on the various possible applications of design methodologies in the day-to-day business of SMEs across Europe.

BEDA's own capacity-building project, »Design Europe 2021«, which concluded at the end of 2018, was co-funded through »Creative Europe« – the European Commission's EUR 1.4bn framework programme 2014–2020. BEDA Members continue to gain access to EU funded programmes with current successes including Design4Innovation (Interreg Europe – lead partner PDR Cardiff Metropolitan University) and »Human Cities« (Creative Europe – lead partner Cité du design, Saint-Etienne).

## Outcomes

But what changes have emerged in the field as a consequence of all this activity?

In addition to outputs and outcomes triggered by the specific projects mentioned, it could be argued that spill-over effects include a wider consensus on the need for design policy.

For example, a number of Member States, including Denmark, Estonia, Ireland and Slovenia, have produced their own design action plans and two – Finland and Latvia in 2013 and 2018 respectively – have published national design strategies. These outcomes demonstrate the potential to mobilise the design agenda at the highest levels of government.

In recent years, design and innovation policy labs have also emerged as a tool to support the development of user-centred design policy and services. To cite only two of many, these include the Commission's own EU Policy Lab, a collaborative and experimental space for innovative policy-making, and Northern Ireland's iLab which aims to improve public services and policy by creating a safe space to co-create ideas, test prototypes and refine concepts with citizens, civil servants and stakeholders.

### Comparable data

Much has been achieved since 2006. The great sweep of policies, strategies, action plans and activities of recent years could perhaps be likened to a flowing river. And a flowing river, even a large one, without the right conditions and with no nourishment, will dry up. For momentum to be maintained, Europe's policy-makers must continually be reminded of design's strategic and practical role in improving the lives of its citizens.

BEDA understands that a key nutrient, vital to the on-going development of design-led policy, is trustworthy, robust and comparable data. Without this, evidence-based policy-making cannot happen.

This Report 2.0 therefore offers a snapshot into design and the design industries across Europe. It is intended to offer insight to policy-makers and other key stakeholders engaged in the design-driven innovation agenda that is not available anywhere else.

BEDA will therefore continue to work towards still greater alignment of language used in the NACE code 74.10, specialised design activities. In particular, the intent is to introduce and harmonize across all Member States the naming and indicated content of subcategories of 74.10, to gain further knowledge of the economic importance of different design disciplines, and to ensure greater levels of comparability.

It seeks to maintain the momentum built up since 2006 and to support the increased recognition by policy-makers of design's importance to Europe's economy, culture and public-sector innovation.

**Michael Thomson**

Founder and Director, Design Connect | BEDA Vice President and President 2005–2009

# Albania

**Population: 2.9m**  
**GDP in PPS: 29%**

There are approximately  
**350** registered designers/design studios in Albania.  
**120** to **150** are self-employed and **175** to **200** employed.

**47%** work in graphic and communication design as major design field,  
**35%** in interior design,  
**10%** in illustration,  
**5%** in fashion and textile design, and  
**3%** in product and industrial design.

The total annual turnover per professional designer is  
EUR **6,000**.  
**15** to **20%** of all Albanian designers work for international clients.

The average number of employees of a designer/design studio is  
**1** to **3**; the around  
**15** established design agencies have  
**8** to **15** designers employed.

Albania has  
**4** design universities, where up to  
**50** people graduate annually.

# Austria

**Population: 8.8m**  
**GDP in PPS: 128%**

**31,300** designers professionally work in the country,  
**11,100** are self-employed **20,200** are employed.

The fields of design are

- 56 %** graphic and communication design,
- 23 %** product and industrial design,
- 8 %** environmental and interior design,
- 8 %** illustration, and
- 5 %** in fashion, textile and other design fields.

The total annual turnover of design activities is  
EUR **4.76bn**.

The average annual turnover per designer comes up to  
EUR **137,600**.

**58 %** of all designers work for international clients;  
**17 %** earn more than **50 %** of their annual income from international contracts.  
**47 %** of all designers have **1** or more employees, the average is  
**1.8**.

There are

**31** design schools, of which  
**19** courses are at university level. There are approximately  
**1,300** graduates per year.

# Belgium

**Population: 11.4m**  
**GDP in PPS: 118%**

More than

**200,000** jobs in Belgian companies are related to design; by estimation around **15 % (30,000)** are professional designers. More than **6,200** of those work in Flanders, around **5,000** are self-employed.

In average every design company has **3.5** employees.

The fields of design activities are:

**25 %** each in graphic and communication as well as product and industrial design, **15 %** in environmental and interior design, **15 %** in fashion and textile design, **15 %** in crafts, and **5 %** in illustration.

The total turnover of design activities is EUR **0.92bn** (Flanders: EUR **0.6bn** which makes **0,1 %** of the GDP).

There are

**23** design schools, out of which **11** are universities/academies.

More than

**710** students graduate annually.

Flanders DC, Wallonie Bruxelles Design Mode & Wallonie Design

# Bosnia and Herzegovina

Population: 3.5m  
GDP in PPS: 32%

**600 to 700** designers work in Bosnia and Herzegovina, around **60 to 70%** are self-employed, and **30 to 40%** are employed.

The fields of activity in design are  
**35%** graphic and communication design,  
**25%** enviromental and interior design,  
**20%** product and industrial design,  
**8%** fashion and textile design,  
**4%** illustration, and  
**8%** others.

The total turnover of design activities is  
EUR **10 to 30m** which constitutes **0.001%** of the GDP.  
In average a designer's annual turnover is between EUR **5,000** and EUR **20,000**.

**1 to 3%** work internationally, realizing a turnover between EUR **1 to 2m**.  
**2 to 10** is the average number of employees of a designer/design studio.

There are  
**8** high schools and  
**8** colleges, of which  
**6** are universities.  
In high schools the number of annual graduates is  
**300**, in colleges there are  
**20 to 30** graduates per year.

# Bulgaria

**Population: 7.1m**  
**GDP in PPS: 49%**

Around

**1,200** designers work in Bulgaria,  
**800** of them are self-employed,  
**400** are employed.

Most of them,

**40** % work in graphic and communication design,  
**13** % in illustration,  
**12** % in fashion and textile design,  
**15** % in environmental and interior design,  
**10** % in product and industrial design, and  
**10** % in other design fields.

**40** % work for international clients,  
making about **70** % contribution to export.

The average number of employees of a designer/design studio is  
**3** to **7** persons.

The total annual turnover per designer is around  
EUR **12,000**.

There are more than

**20** private and public design schools of which **7** are universities.  
Each year approximately **500** students graduate in design.

**Population: 5.5m**  
**GDP in PPS: 109%**

**9,000** professional designers work in the country.  
**60 %** of all designers are self-employed and  
**40 %** are employed.

Designers work  
**30 %** in product and industrial design,  
**30 %** in environmental and interior design,  
**20 %** in graphic and communication design,  
**5 %** in fashion and textile design,  
**5 %** in illustration, and  
**10 %** in other design fields.

The total turnover of design activities is  
EUR **3.23**bn, which is  
**1 %** of the GDP.

The number of employees of a designer/design studio is between  
**1 to 5**; totaling some  
**19,420** people working full-time in the design sector.

Finland has  
**8** design schools, of which  
**2** are universities.  
**100 to 150** students graduate each year.

# France

**Population: 67.0m**  
**GDP in PPS: 104%**

Around

**35,000** designers professionally work in France.

By including the position of design managers the number goes up to **40,000**.

**45 %** of all designers are self-employed, **55 %** employed as

**33 %** inhouse designers, and **22 %** as employees of design studios.

The average number of employees of a designer/design studio is **2 to 3**.

**26 %** work in product and industrial design,

**16 %** in graphic and communication design,

**16 %** in environmental and interior design,

**1 %** in fashion and textile design, and

**41 %** in other »new« design fields e.g. service design, interactive and digital design.

The total turnover per year is

EUR **3.5** to **8**bn which is **0.1** to **0.4 %** of the GDP.

The total turnover per head is

EUR **106,000** to **242,000**.

**70 %** of all French designers work for international clients, but

**40 %** realize less than **5 %**

of their turnover for these clients.

There are **68** design schools delivering diplomas at master level, around

**10** of those are universities. Around

**2.000** students graduate annually with a master degree.

# Germany

**Population: 82.5m**  
**GDP in PPS: 123%**

In 2016 there existed some **147,300** employed designers (in 2003 this figure was only **53,000**), and another **94,600** self-employed.

Major fields of design activity are **24 %** graphic and communication design, **19 %** environmental and interior design, **7 %** product and industrial design, and **50 %** other specialised design fields.

The total turnover of all design activities is EUR **19bn** which makes **0.31 %** of the GDP (**2.47 %** considering all creative industries).

The annual turnover per head is EUR **130,600**.

**22.1 %** of all designers work for international clients with a turnover of EUR **885.1 m**.

Thus, design makes **4.8 %** of a contribution to export.

In Germany about **290** programmes in **120** design schools on tertiary level exist, of which around **15** are private institutions.

## about BEDA

The Bureau of European Design Associations (BEDA) was formed in 1969 as the representative body for professional design associations within the European Union.

BEDA today boasts 46 members from 28 Member States in Europe. Members can be design promotion centres and other publicly funded organisations that promote design national or regional, as well as professional and trade associations for designers from across Europe. These professional associations represent some 400,000 designers from across Europe in every discipline of work from industrial and interior design to digital design and branding.

BEDA provides a platform where members can pool knowledge, awareness and strength. BEDA represents designers' interests with the legislative, legal, financial and other bodies within the EU. BEDA also works towards harmonizing professional design qualifications and raising and maintaining standards within the EU. As a result of years of successful lobbying in Brussels, design is today part of the innovation policy for Europe, called Innovation Union 2020.

## about designaustria

Founded in 1927, designaustria is Europe's third oldest design association. Today, designaustria has about 1,300 members from all design disciplines. designaustria represents the Austrian design scene on both national and international levels, seeking to highlight its achievements through numerous exhibitions, conferences, publications, competitions, and workshops. designaustria organizes the Joseph Binder Award and the Romulus Candeia Prize and since 2001 has been entrusted by the Federal Ministry for Digital and Economic Affairs with conducting the National Design Prize. designaustria is excellently connected to all of the relevant schooling and training facilities and partner organizations in Austria and is represented in numerous advisory boards and commissions. Similarly, designaustria can resort to a large global network through its collaboration with international associations and institutions.
