Summary of the Report on CoP Meeting – Semester 4

PP3: Cyprus Energy Agency

The Cyprus Energy Agency (CEA) organised its 4th Community of Practice (CoP) workshop as a series of individual meetings which are summarised in the full Involvement Report.

During the decentral happening Community of Practice meetings, analytic information was gathered, and a communication plan for the implementation of the developed action plan and frameworks for a taskforce on innovation, research and competitiveness were developed.

The Catalyser Workshop of Sustainable Historical Districts Projects gave valuable input to the entire project team, CEA members and the participants from other countries.

It's worth to mention that Cyprus Energy Agency's participation at the EU WISE event, which took place in October, was a great opportunity to see Good Practices from each other's countries and inspired for new ideas and new actions on regional level.

For this stage of the project, emphasis was given to the establishment of the draft Action Plan for Cyprus and the next steps will be to discuss the outputs of this semester with all the members of the CoP.

Suggestions and findings of the work done in this semester will be presented at the next CoP meeting for additional comments and feedback. When there are some solid results, actions related to the dissemination of the project will take place.

In addition, the creation of the Technical Guidebook which can be used on a voluntarily basis and will include successful interventions, will be re-examined in the next semester, as during this semester it had to be postponed. The Technical Guidebook can be complementary of the Action Plan.
