

#eBussed

eBussed supports regions in the transition towards low-carbon mobility and more efficient public transport in Europe by promoting the use of e-buses.

eBussed on the way towards low-carbon mobility

The field of e-mobility is highly technical and rapidly changing. The transition from diesel bus-based fleet to e-buses requires knowledge from various fields. Knowing the existing solutions and technologies is not often enough. The process benefits from comprehensive information from the user interface to procurement.

We in eBussed project promote the uptake of e-buses in new regions and support the expansion of existing e-fleets. Also, we support the transition of European regions towards low carbon mobility and more efficient public transport by sharing knowledge between regions.

Our aim is to create more effective transport in the six participating regions: Turku in Finland, Hamburg in Germany, Utrecht in the Netherlands, Malta and Gozo in Malta, Livorno in Italy and Tolna in Hungary. Half of the regions already have e-buses, whereas the others are planning of introducing e-buses in their regions.

The work has begun in August 2019, continuing until the end of February 2023.

We welcome you onboard eBussed!
