

# **Bottom-up data, top-down platforms**

**Workshop 1: “Building partnership for data collection: providing the evidence to stimulate effective working across public and private sector”**

**Samu Szemerey**

# Two tales of shared mobility

## Managed vs unmanaged ecosystems

Uber, 2009

Bottom-up car sharing network during strikes, 2009

# Making data work

## Bottom-up and top-down efficiency and impact

Single street sensor installed by Hungarian Cyclist Club shows & communicates growing bicycle traffic, 2010

'Karez' LIDAR model of streets managed by Budapest Transport Commission, 2013

# Data is there, but in fragments and silos

## Do cities even know what they have?

city driven integrated service with sponsors

open data

partner business with vision of integration

some data

competing business started by bike sponsor

no data

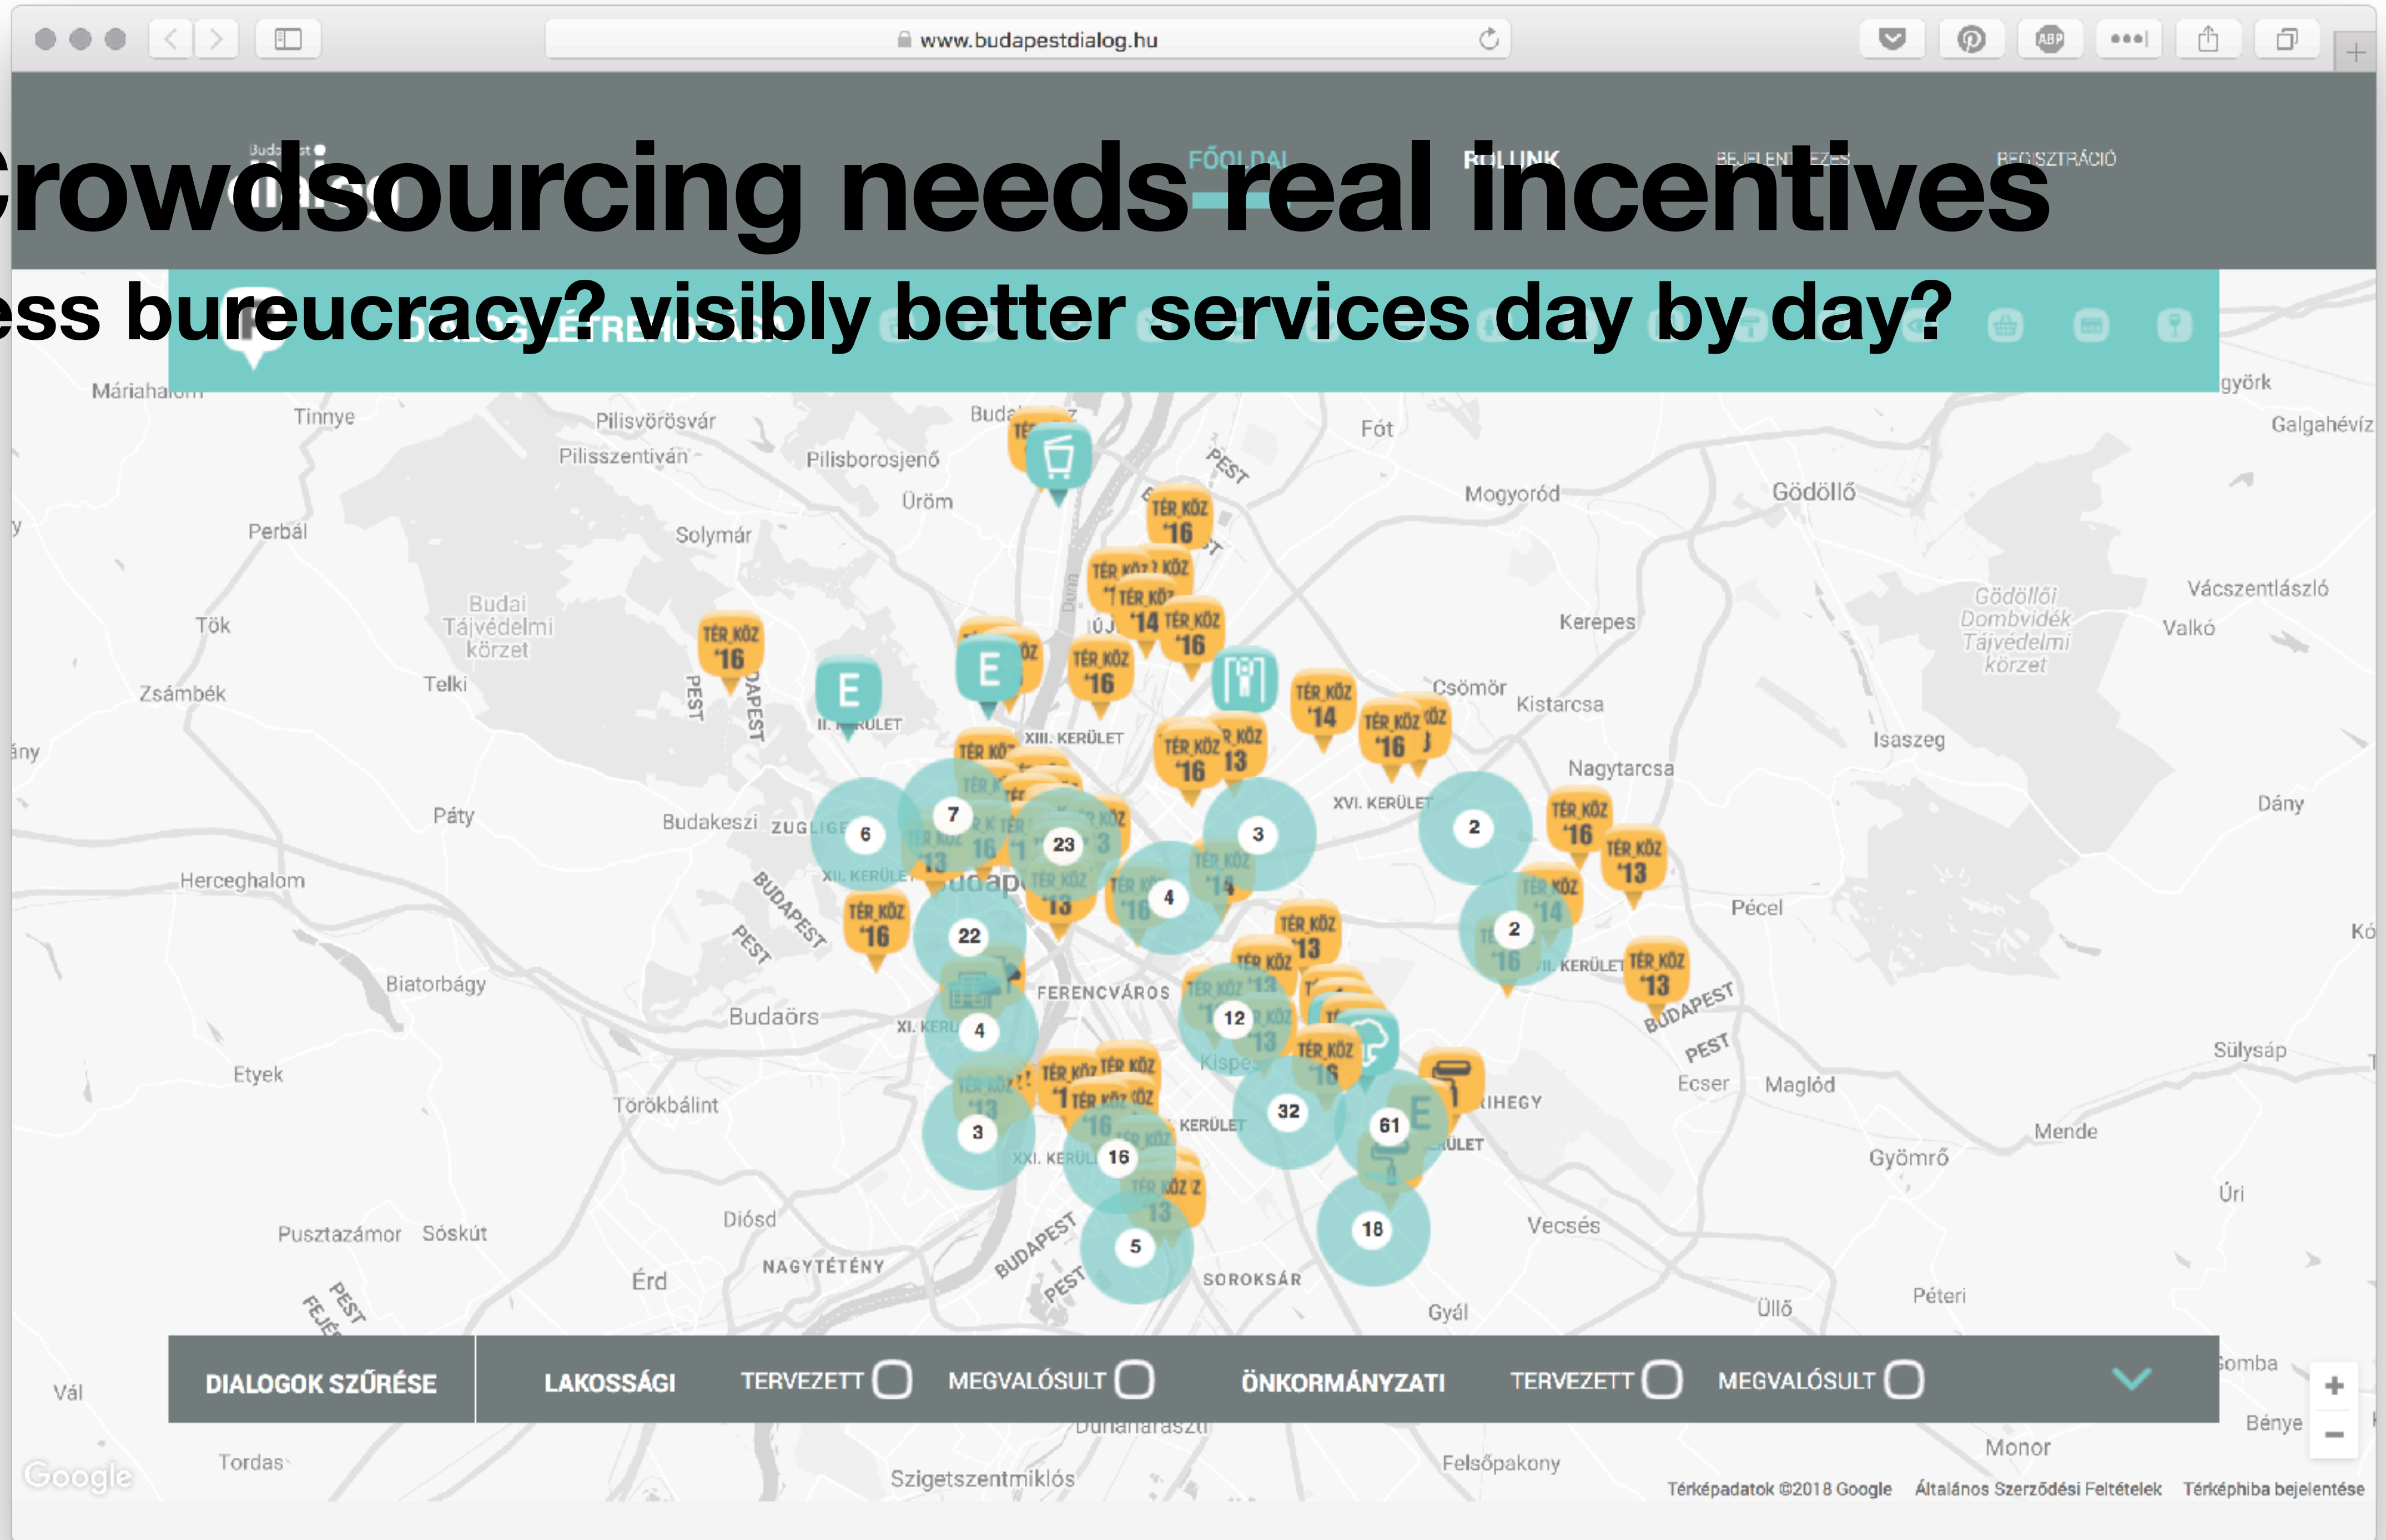

international business running amok

no data

# Crowdsourcing needs real incentives

Less bureaucracy? visibly better services day by day?

# Data is not enough

## Partnerships need facilitation, value proposition and exchange

- What can the city offer to those who provide their data?
- How can the city show what it is doing with the data?
- Does the city need in-house capacity (CTO/CDO) or can it be outsourced?
- How can scalability and interoperability become meaningful for the whole ecosystem?

# City data for audits and monitoring

Provided by Lechner for cities and government

- ISO 37120  
EU Smart Cities Index  
Smart Cities Council
- 6 areas  
24 themes  
68 complex indicators  
215 indicators  
600+ data sets
- 3 city scales
- statistical data  
municipal data  
public surveys  
map-based analytics
- city audit  
strategy evaluation  
monitoring

# Embedding data in local development

## Framework for updating Integrated Development Strategies

# Locating local data

## Options for partnerships?

# Questions to discuss

**Think about these and bring answers / dilemmas to share!**

- Identify 3 goals where data would be useful for you but is not available.  
What could be the ways to find / collect data for these?  
Who are the geeks and weird enthusiasts that could help?
- Is there any comprehensive data-related position in your organization?  
How many departments have data oversight or databases?  
How many legacy systems exist?
- How many steps does it take for a citizen to get an idea across to the relevant department? Do you have a protocol for this?  
How can I reserve a public space for an event?
