Waste Logics Software

Geeta Chandra

Owner / Managing Director

geeta@wastelogics.com

17th September 2020

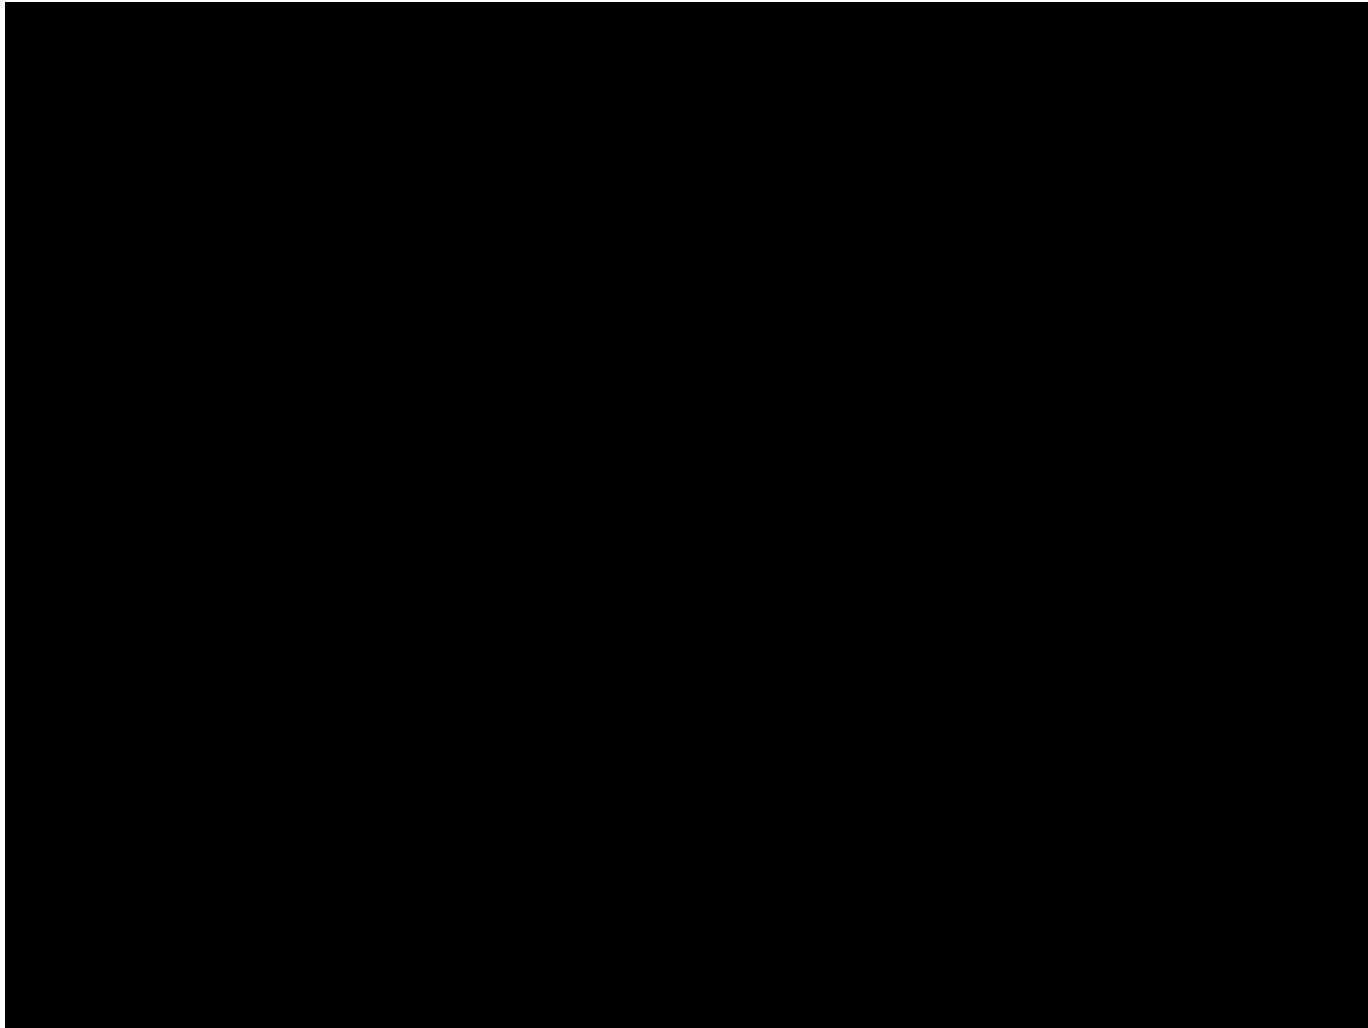

About Waste Logics

- **Incorporated since 2006**
- **Currently a team of 36 and growing**
 - 11 customer facing staff, all of whom have previously worked for waste management companies
 - 25 in the software development team
- **Our product - waste management software**
 - Manages orders, logistics, materials in and out of the recycling facilities, invoicing, reporting, compliance
- **Our clients**
 - 160 waste management companies
 - UK, ROI, US, Cyprus, Australia, New Zealand
 - Organic growth, looking to enter new markets

How do we support the circular economy?

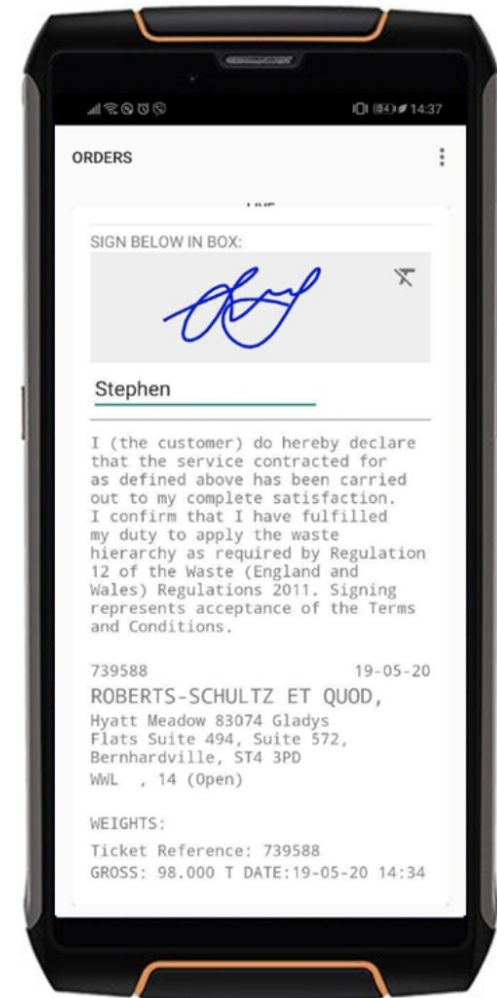

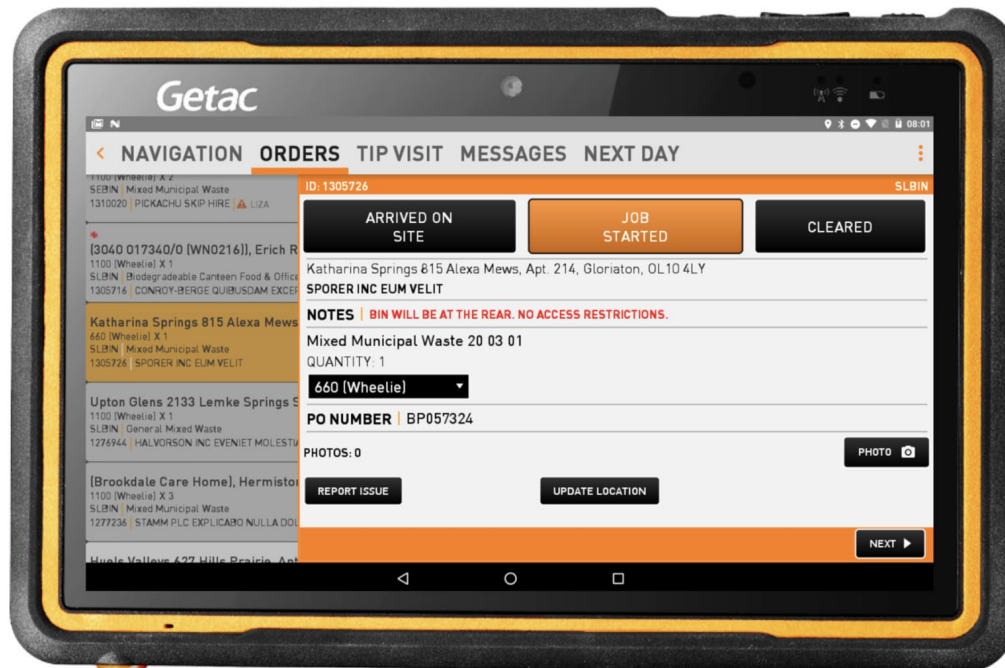

- **By providing this software as a service to our clients**
 - Enables our clients to make better operational decisions
 - Allows them be very transparent to their customers about what is happening with the waste
 - Enables our clients to operate more efficiently
 - Reducing their carbon footprint
 - Being paperless

Reducing their carbon footprint

Being Paperless

- All driver, weighbridge, invoicing and compliance paperwork is electronic
- This saves over 100,000 trees a year across our network

Ideas we still need to develop

- **Using the data we have across our growing network to further support the circular economy**
 - Connect clients within the network across a marketplace
 - Enable greater volumes of waste to be processed in a more efficient way eg We know we have a client doing something more extraordinary with a particular waste stream, so we could broker a deal to make sure more of the output across our network goes into that process
