The RENATUR project Workshop in Gorenjska Region (Slovenia)

Workshop goals

During the workshop we discussed questions related to governance of Green Infrastructure (GI) in peri-urban open spaces (PUOS) and of tourism and recreation in Gorenjska Region.

In particular:

- the role of PUOS as the vital element of the local landscape,
- the natural heritage in PUOS to be recognized as important part of preservation plans/programmes/policies.
- policy makers from Gorenjska introduced the different challenges related to the development of planning and governance approaches towards a long-term preservation of PUOS and their natural heritage.
- better and more effective strategic management of PUOS and its natural heritage
- how to promote the concept of green infrastructure (GI) and to improve governance practices related to GI. The idea is to implement GI to more effectively protect PUOS.

Policy instruments

Policy instruments were identified for two case studies: Bohinj and Škofja Loka along the following questions:

- Which policy instruments are familiar to you that use GI concept to protect natural heritage of PUOS ?
- The policy instrument you mentioned is it: regulatory, economic and informational/motivational policy?

On the following two slides a summery of the discussions are displayed. The slides reflect the author's views only and the Interreg Europe programme authorities are not liable for any use that may be made of the information contained therein.

Policy Instruments (Bohinj)

-  - most helpful to protect natural heritage
-  - easiest to implement

Level	Country	Policy Instrument	Helpfulness	Easiness
National Level	Spain	National strategy for green infrastructure connectivity and restoration		
	Hungary	For a future perspective (2021-2027) there will be a dedicated Operational Programme for Green Infrastructure	 	
	Belgium	Land Development		
	Belgium	Green Deal		
	Belgium	Call for new national parks in Flanders (Nationaal Park Hoge Kempen')	   	
	Slovenia	Guidebook as part of Slovene Spatial Act (Green system in cities and settlements: Directing development of green areas)	   	
Regional Level	Basque country	Chapter 4 of the Spatial Planning Guidelines		
	Austria	Strategic approach from the Kleinwalsertal	    	
	Basque Country	Methodological proposal for the identification and representation of the green infrastructure at the regional level of the Community of the Basque Country		
Local Level	Hungary	Methodological guidance for green infrastructure development and maintenance action plans	  	
	Basque Country	The Urban Green Infrastructure of Vitoria-Gasteiz district by district. A human-scale city		
	Basque Country	Landscape Action Plans (derived from catalogue and landscape determinations (regulatory on regional scale)	      	

Policy Instruments (Škofja Loka)

 - most helpful to protect natural heritage
 - easiest to implement

National Level	Slovenia	<ul style="list-style-type: none"> • Green systems in cities and settlements  
Regional Level	Hungary	<ul style="list-style-type: none"> • Spatial Development Plan of Hajdú-Bihar County  
Local Level	Basque Country	<ul style="list-style-type: none"> • Participatory budgets  
	Basque Country	<ul style="list-style-type: none"> • Aanalysis of the Green Infrastructure and mobility  
	Basque Country	<ul style="list-style-type: none"> • The Urban Green Infrastructure of Vitoria-Gasteiz district by distric. A human-scale city
