

# Mining 2030 -futureproofing the Austrian Raw Materials Strategy

**Michael Tost**

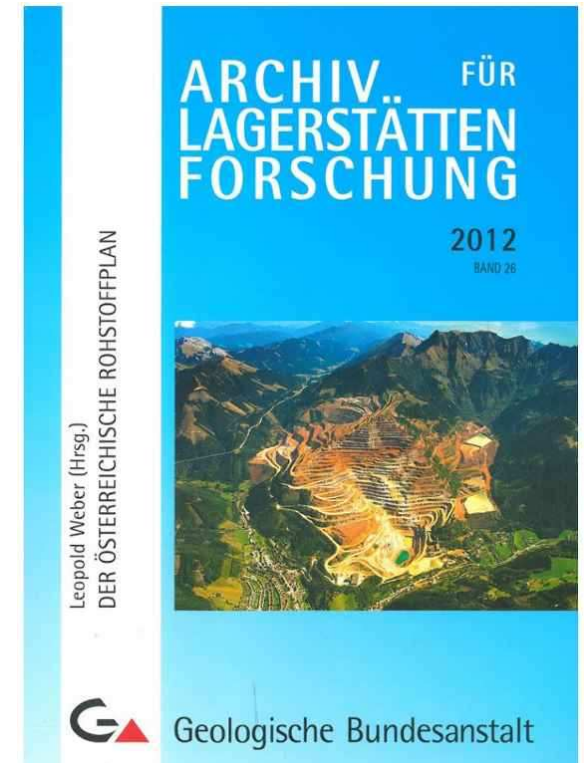

**Montanuniversität Leoben**

WO AUS FORSCHUNG ZUKUNFT WIRD

Chair of Mining Engineering and Mineral Economics

# Context – Austrian Remix participation

- Austrian Mineral Resources Plan (AMRP) as a national master plan to secure supply of mineral resources
- Considered “Best Practice Model” by the European Commission, as an example for an active minerals planning policy, i.e. concerning land use issues
- Update planned by mining ministry – how can it be improved?
  - Learn from others → Remix

# Remix meets Politics...

- Format of peer reviews provided good suggestions
  - Stakeholder engagement
  - Role of mining in the broader context of smart specialisation
  - Clusters and circular economy
- Phase 2 – Update of Raw Materials Strategy 2030
  - Ibiza video caused government change
  - Delays (2019-2020)
  - New government wanted a less inclusive approach

# Austrian Raw Materials Strategy 2030

- Limited, industry focused consultation process
- Draft available
  - Sustainable supply from Austrian sources
  - Sustainable supply from international sources
  - Smart production, circular economy, new technologies and products
- Process monitoring with stakeholders

# Thank you!
