

# CIRCULAR ECONOMY

# Circul'Art 2 : objectives & actions

#### « Ecodesign in the cultural sector from set preparation to waste management »

#### **OBJECTIVE:**

To encourage professionals in the cultural sector of the Paris region to use the best tools and practices for the ecodesign of sets and waste management that are available and/or adaptable to the sector.

#### **4 ACTIONS**

- Identify the actors who share the same issues between sectors and between territories in order to have a global regional approach.
- 2. Identify the best practices working in favor of this objective through a referencing work and promote these tools when raising awareness (dedicated trainings, diffusible supports...).
- 3. Carry out a pilot project on a film set in the Paris Region in order to implement all the recommendations identified.
- 4. Diffusion of the results

#### Circul'Art 2: context

#### Circul'Art 2: issues

1

2

3

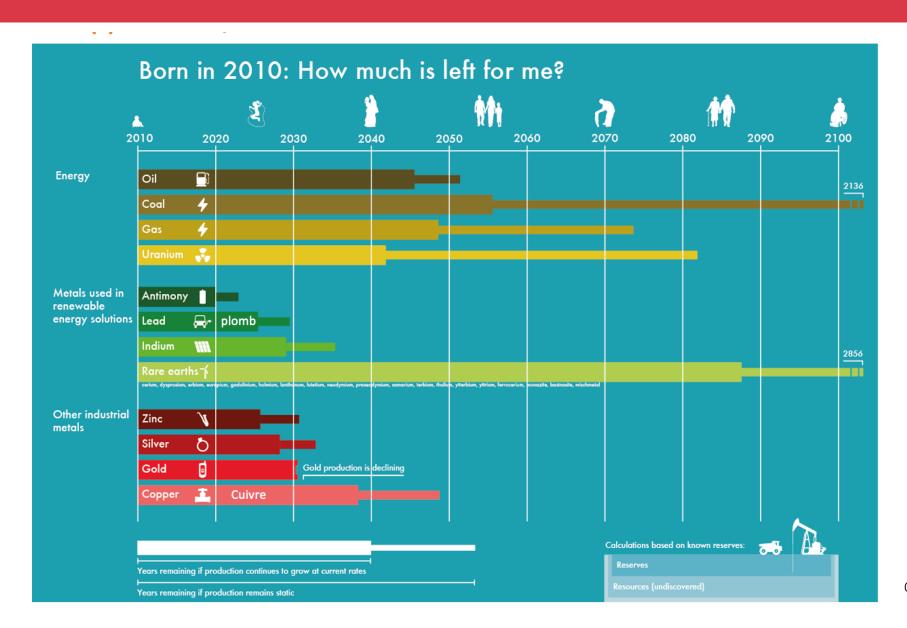

Lack of awareness of eco-design and waste recovery.

Lack of practical, centralized and accessible information

Logistical problems: recovery, storage, short times, geographical dispersion...

#### Circul'Art 2: material issue

### Circul'Art 2 : some figures / global context

- 80% of the Image sector (companies and payroll) and 50% of filming takes place in the Paris region
- In 2020, a study conducted by the Ecoprod collective estimated a carbon footprint of 1.7 million tons of CO2 for the audiovisual and film sector in France
- 40% of the waste from the performing arts and audiovisual sector in the Paris region has an unknown outlet.

### Circul'Art 2 : some figures / global context

- 1/5 of the impact of a shooting is linked to the sets: construction and deconstruction which is done in a short time, just like the the events' sector.
- On average, waste related to sets represents
  15 tons per film.
- Significant potential for reuse and recovery of sets.

## **Circul'Art 2 : some figures / global context**

3 active cultural reuse/recycling centers :

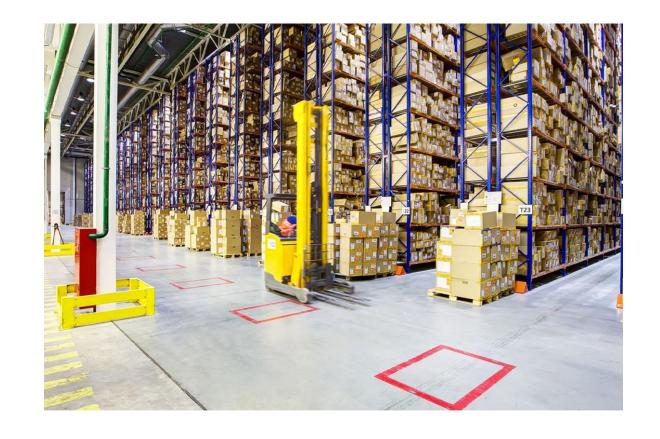

➢ la Réserve des Arts

➤ la Ressourcerie du Spectacle

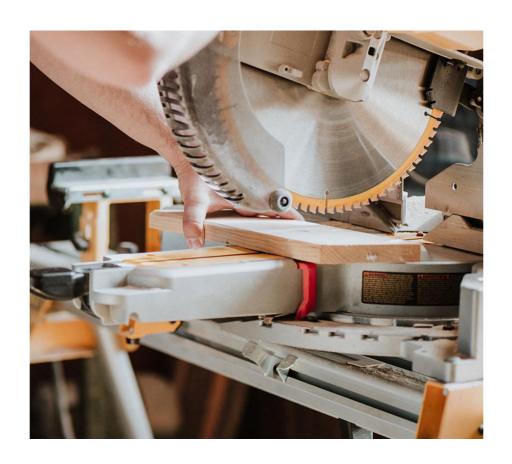

➤ la Ressourcerie du Cinéma

#### Circul'Art 2: study

- 50% have no knowledge of the ecological qualities of the materials used
- 71% are not asked by the production or the stage management about the installation of the office stage management elements
- 91% believe that the studio is the best place to promote ecodesign
- **72%** believe that 30% or more of a set can be made from removable and recoverable sheets
- 69% store office tools that are reused from film to film
- 86% are in favor of shared access to information sources
- 99% would be interested in a dedicated eco-design training

#### **Circul'art 2: Recommandations**

- Organize the **sharing of professional expertise and information** on materials, products, suppliers and service providers.
- Train professionals in eco-design and circular economy.
- In the choice of locations for preparation, construction and filming, take into account accessibility and distance and the grouping of sets.
- Extend the preparation time for a better implementation of an eco-design of sets and thus inform the productions of the work really done during this phase of work, but also on the potential savings induced by a better controlled preparation.
- Improve the quality of the exchange between the decoration team and the stage management and/or the productions concerning the office equipment: sorting garbage cans, coffee machine, water bottles, but also vehicles, preparation area...

#### **Circul'Art 2: Recommandations**

- Implement a referencing as complete as possible of alternative methods, materials and supplies to the most polluting products, in collaboration with suppliers.
- Cross-reference this list with **tests and video tutorials** (materials, etc.), tests currently carried out by Écodéco Ciné.
- Support the reuse of set sheets.

• Need of temporal and financial means for a rational routing of the furniture and accessories after use, during and after the shooting, towards circuits of reuse, recycling or storage.

#### **Circul'Art 2: Referencing and raising awareness**

➤ **Broadcasting** of videos to raise awareness of the circular economy, through testimonials and concrete initiatives in the Paris region: <a href="https://youtu.be/BljyQKeKWRk">https://youtu.be/BljyQKeKWRk</a>
