February 2022

ENERSELVES project returns with news!

The **ENERSELVES** project, launched on September 2021, had as a first aim the definition of the different actions to be developed in the implementation under the **5th Interreg Europe** call.

The partnership defined as first and foremost action, the identification of good practices on how public authorities have managed to boost self-consumption promotion policies during COVID-19 times.

With this general objective in mind, the **ENERSELVES** partners have held various online Local Stakeholder Meetings with relevant local and regional stakeholders, dealing with issues such as the

launch of self-consumption support measures based on EU's Recovery and Resilience Facility Plan, the effect of COVID-19 in the private RE investment levels and the upgrade of the regional self-assessment made by each partner in **ENERSELVES'** phase 1.

ENERSELVES' main objective in this new semester is the full deployment of the above-mentioned actions and the drawing-up of relevant conclusions to be shared in the coming interregional events.
