Investing in a Smart, Sustainable and Inclusive Future

Stephen Boyle
Construction Programme Manager

Our Mission

We exist to create a society where resources are valued and nothing is wasted.

Our strategic outcomes

Zero Waste Scotland will focus on where, as a society, we can have the greatest impact on climate change.

This includes:

- **Responsible Consumption** – where people and businesses demand products and services in ways which respect the limits of our natural resources.
- **Responsible Production** – where a circular economy is embraced by businesses and organisations which supply products and services to get the maximum life and value from the natural resources used to make them;
- **Maximising Value from Waste** – where the environmental and economic value of wasted resources and energy is harnessed efficiently.

Scotland's National Planning Framework 4

“Our focus is on making productive use of existing buildings, places, infrastructure and services, locking in embedded carbon and minimising waste, and supporting Scotland’s transition to a circular economy.”

Promoting a Decarbonised Built Environment

Sir Patrick Geddes

“think global, act local”

Thank you.
