2nd ENERSELVES Newsletter

August 2022

ENERSELVES project extended year was brief but intense!

Keep up with the knowledge gained during this extended year.

WHAT DOES ANOTHER YEAR BRING US?

[Read more >>](#)

The last semester of the [ENERSELVES](#) project was really busy! Lots of activities have taken place and among them, we would like to highlight two interregional events that were held, finally, FACE TO FACE!!

The first one took place in the island of GOZO at the end of April, thanks to our host, MIEMA. This event was split in two days: The first day meetings and exchange of knowledge among partners happened, thanks to an interesting workshop in which partners shared their concerns with regards to “How the COVID 19 situation has affected self-consumption in buildings?” On the second day, [ENERSELVES](#) joined the [RESINDUSTRY](#) project, on two study visits to:

- [Magro Brothers](#): A food industry where its main production line is the processing of tomato and dairy products, and that now has a PV installation of 1.600 panels.
- [FXB group](#): A furniture group which has a wind turbine installation.

The second event was the [ENERSELVES final project event](#), held in Karlskrona (Sweden). As well as the aforementioned, it included two study visits:

- A solar power plant, [Solcel Park in Lyckeby](#) with a 2.4 MW of installed PV power.
- [BJÖRKETORP GÅRD](#): a farm that has invested in PV and biogas installations and is now closer to being a self-sufficient farm. Furthermore, other technical activities have taken place during this semester, such as:
 - The gathering of lessons learned by each partner.
 - Local stakeholder meetings that have allowed a bidirectional communication channel, between partners and stakeholders.

To finalize the semester and its activities, the last meeting was held

online on the 4th of August, in order to review activities, draw conclusions and wrap up the project's results.
