Regionalpark Guiding Concept and route-corridors:

Urban Agriculture in Rhein-Main

- Comparing other metropolitan areas the regional diverse space in Rhein-Main Urban agriculture includes the space of “industrial agriculture”
- This for the impact on landuse has got al lot more “topics”
- Beside agriculture use recreation, climate issues and conservation topics take place
- This requires a multifunctional view...

Stories of inspiration...

- As we have many different claims on free space in our urban region those can not be solved on separated areas
- During the CityZen project we started the discussion process with different stakeholder in the region
- This broadened our horizon on different aspects of land use so we could identify a lack of communication between landusers an landowners (farmers)
- As consequence the CityZen project has initiated different projects or add-ons to exisiting projects connected to agriculture in our metropolitan area ...Some examples...

Communicating Agriculture...

Communicating Agriculture... Foodsupply

Communicating Agriculture... Biodiversity

Communicating Agriculture... Recreation
